Investment objective and policy

The objective of the investment policy is to provide consistent long term capital and income growth. The investment policy for achieving the objective is for the Manager to invest primarily in equity securities. There is no restriction to economic securities or geographical areas, but the manager considers the objective can be achieved from investing predominantly in UK equities and seeking undervalued overseas opportunities.

Managers' commentary

Portfolio re-positioning

- The portfolio has been significantly re-positioned over March and the beginning of April with a view to improve the performance of the Unit Trust. The dividend yield has been rebased to a more sustainable level and it is now our intention to grow the income consistently from here along with capital appreciation over the long-term.
- The Unit Trust has moved from a concentrated portfolio of 23 large capitalisation investments solely listed in the UK to 48 companies offering a more diverse global exposure. The Unit Trust will invest in between 45-55 companies, primarily across UK listed equities in order to maintain close dialogue with company management teams. However up to 25% of the portfolio can be listed overseas as we believe some of the best opportunities can surface globally at different times and in different industries. Currently the portfolio has 15% invested overseas. We look to invest in companies for the long-term meaning the portfolio will have a very low turnover.
- We are bottom up investors believing some of the best opportunities lie in under-covered companies and so we will invest right across the market capitalisation spectrum.
- We aim to find high quality companies trading at appealing valuations. Intrinsically we have a value bias often looking for opportunistic and contrarian investments but also strive to find growth at a reasonable price.
- We employ a concise, simple and transparent strategy that we believe can outperform over the longterm; seeking to find companies with strong balance sheets, with little to no debt, consistent, defensive earnings streams, healthy cash generation, growing dividends and stable market positions. We maintain close dialogue with company management teams and where possible will often spend time at their facilities, meeting employees and continuing to develop our understanding of each business.

Market and Portfolio commentary

Consistent Opportunities Unit Trust delivered a total return of +3.0% in May compared to a +2.8% total return in the FTSE All Share Index which was spurred on by the meaningful contributions from the Oil & Gas and Mining sectors where the Fund is underweight. The FTSE 100 Index hit an all-time high in May following weakness in sterling after underwhelming inflation and GDP numbers meant interest rates were held and expectations for an increase were pushed out to 2019. Towards the end of the month however Italian political concerns fuelled some profit taking across global markets as parties with anti-EU rhetoric tried to form a government and the possibility of a new election will seemingly be a vote on euro membership.

Turning back to the portfolio, Macfarlane Group, a company engaged in designing, manufacturing and distributing packaging products was the biggest contributor to performance, rising 25% as the company qualified for inclusion in the FTSE Small Cap Index. The company continues to perform well post the acquisition of Greenwood's last year and we spent the day at their Milton Keynes facility earlier in the year and were particularly impressed with their Innovation Lab offering.

Electrocomponents delivered an upbeat set of final results which beat market expectations. The company announced its first acquisition, IESA, in over a decade and following a meeting with Lindsley Ruth, CEO, we believe there is considerable potential for cross-selling the Group's higher margin own-brand product, RS Pro, through IESA's proprietary purchasing platform.

Other notable moves were seen across recently listed JTC Group, the provider of fund, corporate and private wealth services to institutional and private clients with the shares rising 23% in the month. Bodycote, the Heat Treatment and Specialist Technologies company, raised guidance with Specialist Technologies' revenues particularly strong growing 12% at constant currency.

We also took part in an oversubscribed placing in Zotefoams, the specialist foam manufacturer, to facilitate further capacity expansion with a new manufacturing plant proposed in Europe. This was customer led with their relationship with Nike continuing to go from strength to strength.

The biggest detractor to performance was Pets at Home after management reduced Group gross margin targets and results showed a bigger than expected working capital outflow. The company saw good performance from its retail operations with LFL's increasing in Q4 to +7.5% and with 84% of vet practices being immature, we believe this provides good growth potential over the medium term.
